

Difficult but necessary to:

Find the balance between:

- * acceptable level of service
- * undisturbed full connectivity

Make the route set-up:

- * transparent to the user
- * not reflected in the address
- * improving the delivery times

Adopt **one**, widely-used, standard address format.

Set-up for **least** protocol conversion.

Aim for:

- * maximum consistency of rules imposed to the user.
- * minimum restrictions to the network configuration data.
